an arrival module configured to determine an inter-arrival coefficient of variation (COV) using the index of burstiness;
a COV module configured to determine a COV queue delay comprising the inter-arrival coefficient of variation;
an exponential (EXP) module configured to determine an EXP queue delay using an exponential distribution of queue arrivals; and
a weighting module configured to determine a queue delay using the COV queue delay and the EXP queue delay.

Consider Claim 10

The prior arts fail to teach the following limitations:

determining an inter-arrival coefficient of variation (COV) using the index of burstiness;
determining a COV queue delay comprising the inter-arrival coefficient of variation;
determining an exponential queue delay (EXP queue delay) using an exponential distribution of queue arrivals; and

determining a queue delay using the COV queue delay and the EXP queue delay.

Consider Claim 19

The prior arts fail to teach the following limitations:

determining an inter-arrival coefficient of variation (COV) using the index of burstiness;

determining a COV queue delay comprising the inter-arrival coefficient of variation;

determining an exponential queue delay (EXP queue delay) using an exponential distribution of queue arrivals; and

determining a queue delay using the COV queue delay and the EXP queue delay.
